Tue, 04 Dec 2018 22:23:00 GMT 1951 | Wechsler Adult Intelligence Scale | Schizophrenia - Alzheimer's disease (AD), also referred to simply as Alzheimer's, is a chronic neurodegenerative disease that usually starts slowly and worsens over time. It is the cause of 60-70% of cases of dementia. The most common early symptom is difficulty in remembering recent events (short-term memory loss). As the disease advances, symptoms can include problems with language, disorientation ... Tue, 04 Dec 2018 16:11:00 GMT Alzheimer's disease -

Wikipedia - Spina bifida is a birth defect where there is incomplete closing of the backbone and membranes around the spinal cord. There are three main types: spina bifida occulta, meningocele, and myelomeningocele. The most common location is the lower back, but in rare cases it may be the middle back or neck. Occulta has no or only mild signs. Signs of occulta may include a hairy patch, dimple, dark ...
